

VULCAN 3000 (E) HOT AIR SEAM SEALING TAPE MACHINE

INTRODUCTION

VULCAN3000/E hot air seam sealing tape machine is the ideal equipment for cloth and shoe factories that need to accomplish waterproof seam sealing on water-repellent fabrics like SYMPATEX, NEOPRENE and PVC.

The VULCAN 3000/E machine is built according to the most recent **European safety and quality standards**. VULCAN 3000/E is equipped with a programmable electronic operating system (PLC) , that allowed the introduction of important passive safety features and allows maximum flexibility in case of future modifications to meet potential new standards or fulfilling new needs. The machine is also equipped with a pneumatic tape cutting system with timed tape's forward motion system.

The electronically adjustable air temperature can be monitored on the digital display of the control panel. The transfer of the material occurs by means of the movement of both transport rollers, which speed and pressure are adjustable using specific controls.

TECHNICAL DATA

Electrical voltage.....	Volts AC	220/240
Frequency.....	Hz	50/60
Maximum electricity consumption.....	Watt	2800
Air temperature.....	C°	60 ±600
Motion speed.....	m/min	0÷10
Pneumatic power.....	Bar	6÷12
Length.....	Cm	130
Width.....	CM	65
Height.....	Cm	186
Weight.....	Kg	134
Maximum air consumption.....	Lt/min	200 ca.
